

Predict Rain Tomorrow

Mohammed Abduldaïm

Problem Description

In this project, I attempt to predict whether it will rain tomorrow or not; using the Rain in Australia dataset and Logistic regression

Dataset

The data contains over 14,000 row and 23 columns.

Some of the notable columns are:

- Date
- Location
- Raint Today
- Rain Tomorrow

The rest of the columns describe state of weather each day, such as temperature humidity, sunshine, etc. Which should be very useful in building a model
