Predict Rain Tomorrow

Mohammed Abduldaim

Problem Description

In this project, I attempt to predict whether it will rain tomorrow or not; using the Rain in Australia dataset and Logistic regression

Dataset

The data contains over 14,000 row and 23 columns.

Some of the notable columns are:

- Date

- Location

- Raint Today

- Rain Tomorrow

The rest of the columns describe state of weather each day, such as temperature humidity, sunshine, etc. Which should be very useful in building a model

Tools

Technologies:

- Python

- Google Colab

Libraries:

- Pandas

- Seaborn

- Matplotlib
